TRANSFER

the world latest heat transfer technic

OUR SERVICES

LASER ENGRAVING

Laser Engraving is a type of engrave (Energy from a high percentage of the light energy which turns into heat) which uses a beam emitted from a controller. The beam emitted from it allows the controller to trace patterns into the material surface. It uses a method of cutting through the paint of a metal part and this is generally how a material is laser engraved. Most importantly, it creates a LONG LASTING EFFECT.

SILKSCREEN PRINTING

Silkscreen printing is a versatile printing method, which uses a fine mesh (made from synthetic polymer) or a small aperture, which is mounted tightly onto a frame (made from either wood or aluminium). With the help of a piece of squeegee, ink, photo emulsion and screen, we are already able to print out any image onto the products. Silkscreen printing with its different types of inks, is commonly used on flat products (Ceramics, Textiles, Wood, Paper, Glass and Plastic Materials).

Pad Printing is a type of process which can transfer a 2D image into a 3D object. Silicone rubber is used to transfer the solvent-based ink layer picked up by the printing plate onto the subject / material surface. By using this printing method, we can print on round products (such as pens, pencils and bottles), metal items (such as metal keychains, thumb drives, power banks and so on), items that curve inwards, outwards and also on items that have more than 2 angles (Precision tools such as brackets, Swiss Army knife and so on), textured fabrics, flat products, and many more.

PAD PRINTING

UV PRINTING

UV Printing is a form of digital printing that uses ultraviolet lights to dry or cure ink as it is printed. Advantages of using UV printing are that the ink can dry on plastic and other non-porous materials (Such as food containers, ceramic items, adapters, crystals and so on). It can also be used on acrylic and aluminum materials and most importantly, full color printing can be done at a minimum cost if compared with Silk-screening or Pad Printing. This curing process is also environmentally friendly as it produces few odors and VOC's.

SUBLIMATION PRINTING

Sublimation Printing is a form of digital printing that combines with heat, pressure and transfer technique. The printing output is almost permanent, high resolution and full color printing can be done. This sublimation process works well with polyester, polymer coated materials, decorating materials (Such as T-Shirts, banners and signs), novelty items (Such as lanyards, plaques, coating mugs, tiles and hand phone covers) and on any related sublimation friendly surfaces.

CRYSTAL FILM PRINTING

Crystal Film Printing is a form of digital printing that prints on transparent film and then sticks the latter onto the crystal using special glue. The glue on the crystals needs to be evenly distributed before sticking the film onto the crystal.

FULL COLOUR DIGITAL PRINTING C/W EPOXY DOME

Full Colour Digital Printing is a form of printing that prints from digital based images directly to a variety of materials. Usually it is printed using ink-jet or laser printer and able to print in high volume. If the printing image is small (Not more than 5cm in size), it can come together with epoxy dome (A clear plastic coating which is able to make your printing look elegant and protect it from damage).

MACHINE EMBROIDERY

Machine Embroidery is a form of computerized technique using embroidery software to do stitching on top of materials. Embroidery is usually done on fabric materials such as bags, caps, T-Shirts, Blankets and so on. A fine embroidery is usually defined by how fine is each count of stitches from the logo artworks or monograms.

ROLLER PRINTING

Roller printing generally known as cylindrical screen printing, is another method of printing which uses a cylinder method. It has fine sharp outlines and good prints can be obtained which is difficult to get in block or screen printing. It is able to print on any round products such as pens, bottles, mugs, tubes, cans and so forth. Roller printing is usually used on multi-color artwork and pattern as each color can be fitted nicely into its proper place without faulty joints at its point of repetition.
